

CENTRALIZED CLOUD MANAGEMENT

Enterprise Management of eClear & Team Profiles

The eClear Cloud is a fantastic cloud-based application that is designed to make the eClear experience simple for everyone. The application helps operators manage the following:

eClear Cloud Features:

- Live Monitor eClear Devices to see all people who are being screened from any door, building from any location
- Face Journal provides logging so you can see screening history
- Faces are where profiles are managed for team members, vendors, and other individuals who come into your environment
- Devices allow centralized management of all eClear cameras across your realm
- General Setup is where your account can be configured to fit your environmental needs

*eConnect will host the application for you, however, operators can choose to host the application in Microsoft Azure or Amazon Web Services.
